3. Design Rationale Document

● Project Overview

Larris is a web-based platform designed as a merchant profile and independent self-pickup ordering system tailored specifically for the campus cafeteria ecosystem. The website aims to minimize on-site queues, accelerate food service delivery, and provide a modern, responsive, and seamless transaction experience for the university community.

● Design Objective

1. Display food menu items (such as batagor and siomay) clearly and attractively, complete with their customization options.
2. Provide an intuitive ordering workflow and real-time order status tracking for users.
3. Support fully responsive access across desktop and mobile devices for students ordering on the go.

● Target Audience

1. Active university students.
2. Faculty members.

● Color Selection

1. **Maroon (#810B38)** as the primary color to represent trust, elegance, and professionalism.
2. **Light Beige (#F1E2D1)** to create a warm and welcoming impression.
3. **Soft Cream (#DCC3AA)** for clean and comfortable background elements.
4. **Dark Brown (#541A1A)** to provide strong visual accents and depth.

- Typography

Font Family: Lexend Zetta

1. **Bold** – Main Headings
2. **SemiBold** – Section Titles
3. **Medium** – Navigation & Labels
4. **Regular** – Body Text
5. **Light** – Secondary Text
6. **ExtraLight** – Supporting Elements
7. **Thin** – Decorative Elements

- Layout Design

1. Top navigation menu for easy access.
2. Consistent spacing and alignment throughout.
3. Responsive grid system optimized for desktop and mobile.
4. Clear visual hierarchy for usability and focus.

- User Experience (UX)

1. Fast and effortless browsing and filtering of food products.
2. Transparency in queue waiting times through real-time order processing updates.
3. Simple and frictionless pre-transaction shopping cart management.
4. A streamlined, clean administrative dashboard system for efficient kitchen operations.

- Main Features:

1. Homepage: Displays promotional banners, Kios Larisa profiles, and featured menu items.
2. Product Catalog: Lists all available food and beverage products equipped with category filtering.
3. Product Detail Page: Shows complete descriptions, base prices, and extra choices like additional toppings.
4. Cart System: A temporary item repository before entering the checkout and confirmation flow.
5. Order Tracking & Pickup: An invoice module containing order receipts and **status_ambil** info to monitor prep stages.

- Admin Features:

1. Manage products catalog data (Add, Edit, Delete, View Menu items).
2. Manage product categories.
3. Order Management Dashboard (to transition order status from 'Cooking' to 'Ready for Pickup').

- Responsive Design

Responsive Web Design dengan CSS custom (Flexbox + Grid + Media Query)

- Front end

1. HTML5
2. Bootstrap Framework
3. JavaScript (Vanilla JS / jQuery)

- Back end

Native PHP

- Database

MySQL

- Version control

GitHub Public Repository

4. Conclusion

Larris website is designed to provide a professional merchant profile and an efficient self-pickup ordering platform with a focus on simplicity, usability, and responsiveness. By integrating structured relational database management and a user-friendly interface, the system effectively optimizes cafeteria transaction workflows, minimizes waiting times, and enhances the overall dining experience for the campus community.
